

Caring for your lawn

Basic guide to maintaining a healthy lawn

It will take a few weeks for your lawn to establish and in that time it's essential you water the turf regularly so that it does not dry out.

Make good use of the water butt in your garden to water the turf several times a day with a watering can.

Start mowing the lawn when the grass reaches 2.5cm - 5cm high.

Be careful not to remove more than one third of the total height of the grass at a time.

Please be aware that neither IcenI, your landlord or the builder are responsible for any making good to the lawn, should the turf fail to take.
